

Wire Wizard -

- A complete system for connecting the Arrow- / EcoPack to the welding machine.

Elga have today the pleasure to offer a complete system for connecting the Arrow- / Eco Pack to the wire feed unit of the welding machine. Previously offered system has partly been incomplete with a lot of home made local solutions as a result. These solutions have not always been optimal for the wire feeding. We are therefore very pleased to have a full range system that guarantees an optimal transport of the wire from the drum to the wire feed unit.

The Wire Wizard system consist of everything from plastic dispensing cones fitting both the round Arrow Pack as well as the octagonal Eco Pack (1); quick connectors that is mounted directly on the cone (2); wire conduits in three different lengths (3) and quick connections fitting both feed units with chassis and without as in robot installations (4, 5). For the handling of drums there are also a trolley and lifting device (6, 7).
